Unit 1 - Math Is... (10 days) August 15 - August 26

General Description of the Unit

The focus of this unit is to build students' agency as doers of mathematics; to build students' proficiency with the habits of mind that are integral to doing mathematics; and to build understanding of the norms of interaction that allow for a productive math learning environment where students can develop, refine, and enhance the habits of mind that are integral to doing math.

Priority Standards

- **2.CA.1** Add and subtract fluently within 100.
- **2.NS.6** Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones (e.g. 706 equals 7 hundreds, 0 tens, and 6 ones). Understand that 100 can be thought of as a group of ten tens - called a "hundred." Understand that the numbers 100, 200, 300, 400, 500, 600, 700, 800, 900 refer to one, two, three, four, five, six, seven, eight, or nine hundreds (and 0 tens and 0 ones).

Supporting Standards

- **2.CA.5** Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns; write an equation to express the total as a sum of equal groups.
- **2.M.7** Find the value of a collection of pennies, nickels, dimes, quarters, and dollars.
- **2.NS.1** Count by ones, twos, fives, tens, and hundreds up to at least 1,000 from any given number.

Proficiency Scales

- **2.NS.6**

Tiered Assessments**Enduring Understandings**

- Number Routines
- Sense-Making Routines
- Math Language Routines
- Students understand that math is everywhere in their lives.
- Students demonstrate understanding of the problem solving process, with a focus on making sense of a problem and determining a solution plan.
- Students demonstrate understanding of how real-world situations and problems can be modeled with mathematics.

Essential Questions

- What does it mean to do math?
- What do you notice?
- What do you wonder?
- How are reading and math connected?

<ul style="list-style-type: none"> • Students demonstrate understanding of what constitutes a viable argument and how to critique the arguments of others. • Students demonstrate understanding of patterns. • Students understand the factors that contribute to a productive learning environment. 		
<p><u>Key Concepts</u></p> <ul style="list-style-type: none"> • I can reflect on how I use math. • I can recognize the skills, behaviors, and attitudes that help me do math. • I can show a problem in different ways. • I can explain different ways to think about numbers. • I can represent a real-world situation using mathematics. • I can explain tools I can use to solve a problem. • I can construct an argument to explain my thinking. • I can explain my thinking with clear and appropriate terms. • I can use patterns to develop efficient strategies to solve problems. • I can explain why patterns are useful to solve problems. • I can recognize the behaviors and mindsets that support a 	<p><u>Related Concepts</u></p> <ul style="list-style-type: none"> • N/A 	<p><u>Math Terms</u></p> <ul style="list-style-type: none"> • addends • quantity • model • estimate • exact • combinations • patterns • relationships <p><u>Academic Terms</u></p> <ul style="list-style-type: none"> • interview • strengths • describe • represent • visualize • appropriate • defend • efficient • critique • respectful

Unit 2 - Use Place Value to Fluently Add and Subtract within 1,000 (20 days) August 29 - September 26

<p><u>General Description of the Unit</u></p> <p>In this unit, students extend their knowledge of place value to 3-and 4- digit numbers and apply this knowledge to adding and subtracting 3-digit numbers. Students use place value to form estimates of sums and differences by rounding and using compatible numbers. They will extend their understanding of addition properties by discovering the order or grouping of three addends does not change the sum. Students also identify even and odd addition patterns to help check whether a sum is accurate. Students use their understanding of place value to learn strategies such as decomposing and adjusting, and then apply these strategies to help add and subtract more fluently. They also use their understanding of addition and subtraction to solve two-step word problems. Students will extend their understanding of place value, addition, and subtraction learned in previous grades.</p>	
<p><u>Priority Standards</u></p> <ul style="list-style-type: none"> ● 3.NS.1 Read and write whole numbers up to 10,000. Use words, models, standard form and expanded form to represent and show equivalent forms of whole numbers up to 10,000. ● 3.C.1 Fluently add and subtract whole numbers within 1,000 using strategies and algorithms based on place value, properties of operations, and relationships between addition and subtraction. 	<p><u>Supporting Standards</u></p> <ul style="list-style-type: none"> ● 3.NS.2 Compare two whole numbers up to 10,000 using $>$, $=$, and $<$ symbols. ● 3.NS.9 Use place value understanding to round 2- and 3-digit whole numbers to the nearest 10 or 100. ● 3.AT.3 Solve two-step word problems using the four operations of addition, subtraction, multiplication and division (e.g. by using drawings and equations with a symbol for the unknown number to represent the problem). ● 3.AT.1 Solve real-world problems involving addition and subtraction of whole numbers within 1,000 (e.g. by using drawings and equations with a symbol for the unknown number to represent the problem).
<p><u>Proficiency Scales</u></p> <ul style="list-style-type: none"> ● 3.NS.1 ● 3.C.1 	<p><u>Tiered Assessments</u></p>

Unit 3 - Multiplication and Division (13 days) September 27 - October 12

General Description of the Unit

In this unit, students use a variety of representations to show multiplication and division situations. Visual representations of equal groups lay the foundation for multiplication and division. Real-life objects are used first, with students moving to representing multiplication and division with manipulatives, and then with numbers and symbols.

Priority Standards

- **3.C.3** Represent the concept of division of whole numbers with the following models: partitioning, sharing, and an inverse of multiplication. Understand the properties of 0 and 1 in division.

Supporting Standards

- **3.AT.3** Solve two-step real-world problems using the four operations of addition, subtraction, multiplication and division (e.g., by using drawings and equations with a symbol for the unknown number to represent the problem).
- **4.C.7** Show how the order in which two numbers are multiplied (commutative property) and how numbers are grouped in multiplication (associative property) will not change the product. Use these properties to show that numbers can be multiplied in any order. Understand and use the distributive property.
- **3.AT.2** Solve real-world problems involving whole number multiplication and division within 100 in situations involving equal groups, arrays, and measurement quantities (e.g., by using drawings and equations with a symbol for the unknown number to represent the problem).
- **3.C.2** Represent the concept of multiplication of whole numbers with the following models: equal-sized groups, arrays, area models, and equal "jumps" on a number line. Understand the properties of 0 and 1 in multiplication.
- **3.C.4** Interpret whole-number quotients of whole numbers (e.g., interpret $56 \div 8$ as the number of objects

	<p>in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each).</p> <ul style="list-style-type: none"> ● 3.AT.4 Interpret a multiplication equation as equal groups (e.g., interpret 5×7 as the total number of objects in 5 groups of 7 objects each). Represent verbal statements of equal groups as multiplication equations.

Unit 4 - Use Patterns to Multiply by 0, 1, 2, 5, and 10 (11 days) October 13 - October 28

<u>General Description of the Unit</u> In this unit, students discover patterns in products involving the numbers 0, 1, 2, 5, and 10. Students use varying methods and representations to remember multiplication with the factors 2, 5, and 10. They refer back to what they have previously learned about equal groups and repeated addition. A multiplication facts table is also used to find patterns in the products that can help students recall multiplication facts.		
<u>Priority Standards</u> <ul style="list-style-type: none"> ● 3.C.5 Multiply and divide within 100 using strategies, such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$), or properties of operations. ● 3.C.2 Represent the concept of multiplication of whole numbers with the following models: equal-sized groups, arrays, area models, and equal "jumps" on a number line. Understand the properties of 0 and 1 in multiplication. 	<u>Supporting Standards</u> <ul style="list-style-type: none"> ● 3.AT.6 Create, extend, and give an appropriate rule for number patterns using multiplication within 100.

Unit 6 - Connect Area and Multiplication (12 days) November 17 - December 9

<p><u>General Description of the Unit</u></p> <p>In this unit, students discover strategies for finding the area of rectangles and composite rectilinear figures. They are introduced to the concept of finding the area of a 2-dimensional figure by covering it with unit squares without gaps or overlaps and counting the number of unit squares, a process known as tiling. Students apply the distributive property as they discover that they can decompose a larger rectangle is the sum of areas of the smaller rectangles. This understanding is extended to the area of composite figures. Students apply their understanding of area to find the area of figures in real-world situations.</p>	
<p><u>Priority Standards</u></p> <ul style="list-style-type: none"> ● 3.M.5 Find the area of a rectangle with whole-number side lengths by modeling with unit squares, and show that the area is the same as would be found by multiplying the side lengths. Identify and draw rectangles with the same perimeter and different areas or with the same area and different perimeters. 	<p><u>Supporting Standards</u></p> <ul style="list-style-type: none"> ● 3.M.6 Multiply side lengths to find areas of rectangles with whole-number side lengths to solve real-world problems and other mathematical problems, and represent whole-number products as rectangular areas in mathematical reasoning.
<p><u>Proficiency Scales</u></p> <ul style="list-style-type: none"> ● 3.M.5 	<p><u>Tiered Assessments</u></p>
<p><u>Enduring Understandings</u></p> <ul style="list-style-type: none"> ● Students develop understanding of the area of a figure and its relationship to the amount of surface on a figure. ● Students develop an understanding of multiplying two numbers to yield an array of square units covering a rectangular area. ● Students develop understanding of area as the sum of the areas of its non-overlapping parts. ● Students develop understanding of the distributive property as it can be used to find the area of a figure. ● Students build proficiency with tiling and counting unit squares to measure area. 	<p><u>Essential Questions</u></p> <ul style="list-style-type: none"> ● Which doesn't belong? ● What do you notice? ● What do you wonder? ● What question could you ask? ● Is the statement always true?

<ul style="list-style-type: none"> • Students build proficiency with finding area by multiplying. • Students build proficiency with decomposing figures into rectangles to find the area. • Students build proficiency with multiplication fluency as they decompose numbers to find the area of rectangles • Students build proficiency with multiplication facts by finding possible factors of a product.

Unit 7 - Fractions (8 days) December 12 - January 5

General Description of the Unit

In this unit, students begin to explore fractions. They experiment with different ways to partition a whole into equal parts with equal areas. Students learn that the interval between two whole numbers on a number line represents one whole. They can partition the interval into equal parts. Each equal part can be represented using a unit fraction. Students learn that a unit fraction has a numerator of one. Iterations of unit fractions can be used to write a fraction that represents more than one part of a whole. Whole numbers can also be represented as fractions. Fraction tiles, fraction circles, shapes, and numbers lines can be used to model, and skip counting, repeated addition, and multiplication can be used to determine how to write whole numbers.

Priority Standards

- **3.G.4** Partition shapes into parts with equal areas. Express the area of each part as a unit fraction of the whole ($\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{6}$, $\frac{1}{8}$).
- **3.NS.3** Understand a fraction, $\frac{1}{b}$, as the quantity formed by 1 part when a whole is partitioned into b equal parts; understand a fraction, $\frac{a}{b}$, as the quantity formed by a part of size $\frac{1}{b}$. [In grade 3, limit denominators of fractions to 2, 3, 4, 6, 8.]

Supporting Standards

- **3.NS.4** Represent a fraction, $\frac{1}{b}$, on a number line by defining the interval from 0 to 1 as the whole, and partitioning it into b equal parts. Recognize that each part has size $\frac{1}{b}$ and that the endpoint of the part based at 0 locates the number $\frac{1}{b}$ on the number line.
- **3.NS.5** Represent a fraction, $\frac{a}{b}$, on a number line by marking off lengths $\frac{1}{b}$ from 0. Recognize that the resulting interval has size $\frac{a}{b}$, and that its endpoint locates the number $\frac{a}{b}$ on the number line.

Proficiency Scales

- **3.NS.3**

Tiered Assessments

Enduring Understandings

- Students develop an understanding of a fraction as one or more parts of a whole and how to represent them by shading or on a number line.
- Students develop an understanding of a unit fraction as one part of a whole partitioned into equal parts.
- Students develop an understanding of fractions that are equal to one and whole numbers that are written as a fractions.

Essential Questions

- How are they the same?
- How are they different?
- Tell me everything you can.

<ul style="list-style-type: none">● Students build proficiency with partitioning shapes to create equal parts and identify equal parts of a whole.● Students build proficiency with using fraction notation to name unit fractions, fractions, whole numbers as fractions, and fractions greater than one representing them.			
<u>Key Concepts</u> <ul style="list-style-type: none">● I can partition a shape into equal parts.● I can describe the equal parts of a shape.● I can use a fraction to represent one or more parts of a whole.● I can explain how to represent a fraction using the meanings of the numerator and the denominator.● I can represent a fraction on a number line.● I can explain how to represent a fraction on a number line.	<u>Related Concepts</u> <ul style="list-style-type: none">● N/A		<u>Math Terms</u> <ul style="list-style-type: none">● Partition● Denominator● Fraction● Numerator● Unit Fraction● Number Line <u>Academic Terms</u> <ul style="list-style-type: none">● Defend● Support● Comparison● Identify● Determine

Unit 8 - Fraction Equivalence and Comparison (13 days) January 6 - January 25

<p><u>General Description of the Unit</u></p> <p>In this unit, students continue their study of fractions as they develop strategies for comparing two fractions. They learn that fractions can only be compared when they come from wholes of the same size. When they refer to different-sized wholes, the lesser fraction might actually refer to a greater quantity. Representations such as pizzas, circles, rectangles, and fraction models all help students to visually understand how two fractions can be equivalent. lesser fraction might actually refer to a greater quantity. Representations such as pizzas, circles, rectangles, and fraction models all help students to visually understand how two fractions can be equivalent.</p>	
<p><u>Priority Standards</u></p> <ul style="list-style-type: none"> ● 3.NS.7 Recognize and generate simple equivalent fractions (e.g., $1/2 = 2/4$, $4/6 = 2/3$). Explain why the fractions are equivalent (e.g., by using a visual fraction model). 	<p><u>Supporting Standards</u></p> <ul style="list-style-type: none"> ● 3.NS.6 Understand two fractions as equivalent (equal) if they are the same size, based on the same whole or the same point on a number line. ● 3.NS.8 Compare two fractions with the same numerator or the same denominator by reasoning about their size based on the same whole. Record the results of comparisons with the symbols $>$, $=$, or $<$, and justify the conclusions (e.g., by using a visual fraction model).

Unit 9 - Use Multiplication to Divide (16 days) January 26 - February 16

<u>General Description of the Unit</u> In this unit, students use patterns and the relationship between multiplication and division to help determine whether a quotient is reasonable or accurate. Students should also be aware that multiplication and division related operations. Students can also use multiplication facts to remember related division facts. The related multiplication and division equations can be represented by the same array.	
<u>Priority Standards</u> <ul style="list-style-type: none">● 3.C.3 Represent the concept of division of whole numbers with the following models: partitioning, sharing, and an inverse of multiplication. Understand the properties of 0 and 1 in division.	<u>Supporting Standards</u> <ul style="list-style-type: none">● 4.AT.2 Recognize and apply the relationships between addition and multiplication, between subtraction and division, and the inverse relationship between multiplication and division to solve real-world and other mathematical problems.● 3.AT.2 Solve real-world problems involving whole number multiplication and division within 100 in situations involving equal groups, arrays, and measurement quantities (e.g., by using drawings and equations with a symbol for the unknown number to represent the problem).● 3.C.5 Multiply and divide within 100 using strategies, such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$), or properties of operations.● 3.C.6 Demonstrate fluency with mastery of multiplication facts and corresponding division facts of 0 to 10.

Unit 10 - Use Properties and Strategies to Multiply and Divide (11 days) February 17 - March 6

<p><u>General Description of the Unit</u></p> <p>In this unit, students will use their previous knowledge of patterns to lay the foundation for their work with identifying multiplication patterns. Students learn about how place value, patterns, and properties can be used to help multiply. Students discover that when multiplying with three or more factors, they can group the factors in any order and the product will be the same.</p>	
<p><u>Priority Standards</u></p> <ul style="list-style-type: none"> • 3.AT.3 Solve two-step real-world problems using the four operations of addition, subtraction, multiplication and division (e.g., by using drawings and equations with a symbol for the unknown number to represent the problem). 	<p><u>Supporting Standards</u></p> <ul style="list-style-type: none"> • 3.C.5 Multiply and divide within 100 using strategies, such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$), or properties of operations. • 3.AT.6 Create, extend, and give an appropriate rule for number patterns using multiplication within 100. • 4.C.7 Show how the order in which two numbers are multiplied (commutative property) and how numbers are grouped in multiplication (associative property) will not change the product. Use these properties to show that numbers can be multiplied in any order. Understand and use the distributive property.

Unit 11 - Perimeter (11 days) March 7 - March 21

<u>General Description of the Unit</u> In this unit, students discover strategies for finding the perimeter of figures, including work with composite figures. Students are introduced to perimeter by finding the distance around a rectangle and then a rectangular garden. After finding the perimeter of rectangles students continue to find the perimeter of irregular and composite figures. Knowledge of perimeter leads students to finding missing, or unknown, side lengths.	
<u>Priority Standards</u> <ul style="list-style-type: none">● 3.AT.5 Determine the unknown whole number in a multiplication or division equation relating three whole numbers.	<u>Supporting Standards</u> <ul style="list-style-type: none">● 3.AT.2 Solve real-world problems involving whole number multiplication and division within 100 in situations involving equal groups, arrays, and measurement quantities (e.g., by using drawings and equations with a symbol for the unknown number to represent the problem).● 3.M.7 Find perimeters of polygons given the side lengths or by finding an unknown side length.

Unit 12 - Measurement and Data (21 days) March 22 - April 27

General Description of the Unit

In this unit students explore a variety of measurement and data topics while applying skills with the four operations to solve problems related to those topics. Students work with liquid volume and mass, tell time to the minute and determine time intervals, and collect/record data and create/analyze scaled picture and bar graphs. Students also measure to halves and fourths of an inch and show such measurement data on a line plot.

Priority Standards

- **3.M.2** Choose and use appropriate units and tools to estimate and measure length, weight, and temperature. Estimate and measure length to a quarter-inch, weight in pounds, and temperature in degrees Celsius and Fahrenheit.
- **3.M.3** Tell and write time to the nearest minute from analog clocks, using a.m. and p.m., and measure time intervals in minutes. Solve real-world problems involving addition and subtraction of time intervals in minutes
- **3.M.4** Find the value of any collection of coins and bills. Write amounts less than a dollar using the ¢ symbol and write larger amounts using the \$ symbol in the form of dollars and cents (e.g., \$4.59). Solve real-world problems to determine whether there is enough money to make a purchase.

Supporting Standards

- **3.DA.1** Create scaled picture graphs, scaled bar graphs, and frequency tables to represent a data set—including data collected through observations, surveys, and experiments—with several categories. Solve one- and two-step “how many more” and “how many less” problems regarding the data and make predictions based on the data.
- **3.DA.2** Generate measurement data by measuring lengths with rulers to the nearest quarter of an inch. Display the data by making a line plot, where the horizontal scale is marked off in appropriate units, such as whole numbers, halves, or quarters.
- **3.M.1** Estimate and measure the mass of objects in grams (g) and kilograms (kg) and the volume of objects in quarts (qt), gallons (gal), and liters (l). Add, subtract, multiply, or divide to solve one-step real-world problems involving masses or volumes that are given in the same units (e.g., by using drawings, such as a beaker with a measurement scale, to represent the problem).

Unit 13 - Describe and Analyze 2-Dimensional Shapes (11 days) April 28 - May 12

<p><u>General Description of the Unit</u></p> <p>In this unit, students will explore categories and relationships among 2-dimensional shapes and their attributes. Students learn that a polygon with four sides is a quadrilateral, students label 2-dimensional shapes based on right angles and equal side lengths. Students learn that a right angle is an angle that forms a square corner. They will also discuss the attributes that quadrilaterals share.</p>	
<p><u>Priority Standards</u></p> <ul style="list-style-type: none"> 3.G.2 Understand that shapes (e.g., rhombuses, rectangles, and others) may share attributes (e.g., having four sides), and that the shared attributes can define a larger category (e.g., quadrilaterals). Recognize and draw rhombuses, rectangles, and squares as examples of quadrilaterals. Recognize and draw examples of quadrilaterals that do not belong to any of these subcategories. 	<p><u>Supporting Standards</u></p> <ul style="list-style-type: none"> 3.G.1: Identify and describe the following: cube, sphere, prism, pyramid, cone, and cylinder. 3.G.3: Identify, describe and draw points, lines and line segments using appropriate tools (e.g., ruler, straightedge, and technology), and use these terms when describing two-dimensional shapes.
<p><u>Proficiency Scales</u></p> <ul style="list-style-type: none"> 3.G.2 	<p><u>Tiered Assessments</u></p>
<p><u>Enduring Understandings</u></p> <ul style="list-style-type: none"> Students build on their understanding of polygons and learn about their attributes of polygons Students build on their understanding of quadrilaterals to identify the different attributes of quadrilaterals. Students will build on their understanding of attributes to name and classify quadrilaterals. Students build on their understanding of 2-dimensional shapes by using given attributes to draw quadrilaterals. 	<p><u>Essential Questions</u></p> <ul style="list-style-type: none"> How can I identify, classify, and draw 2-dimensional shapes? (Unit Question) What 2-dimensional shapes do you already know? What do you already know about analyzing shapes? (13-1) How are they the same? (13-1) How are they different?(13-1) What do you notice about all the images?(13-1) What are some different ways you can compare the signs to each other?(13-1) How might you group the signs?(13-1)

<div></div>			<ul style="list-style-type: none">• What do you notice that is the same among all the quadrilaterals? (13-2)• What kind of differences do you see among the quadrilaterals? (13-2)• How can you compare the quadrilaterals using what you know about polygons? (13-2)• What is the difference between a square and rectangle? (13-3)• How can you draw shapes to help you think about statements? (13-3)• What do you know about the attributes of rectangles? the attributes of squares? (13-3)• What type of shape might the student be drawing? How do you know? (13-4)• What do you notice about the parts of the shape already drawn? (13-4)• Can you think of any shapes that cannot be created based on the part of the shape you see? Explain? (13-4)• The figure extends forever in both directions. This is indicated by the arrows. Is this figure a line or point? (IN Lesson)• What shape is the gift? (IN Lesson)• What is the shape of the soup can? (IN Lesson)• Which item can roll? (IN Lesson)
<div><div><div><div><div></div><div></div></div><div><div></div><div></div></div></div><div><div></div><div></div></div></div><div><div><div><div></div><div></div></div><div><div></div><div></div></div></div><div><div></div><div></div></div></div></div> <div><div><div><div></div><div></div></div><div><div></div><div></div></div></div><div><div></div><div></div></div></div> <div><div><div><div></div><div></div></div><div><div></div><div></div></div></div><div><div></div><div></div></div></div> <div><div><div><div></div><div></div></div><div><div></div><div></div></div></div><div><div></div><div></div></div></div>
